## DETAILED ACTION

### *Response to Amendment*

1. Applicant's amendment filed on April 24, 2008 has been entered. Claims 1-10 are still pending in this application, with claims 1 and 2 being independent.

2. Claims 1-10 are allowed.

Regarding **claim 1 and subsequent dependent claims**, Isogai et al (US 2002/0108239 A1) disclose a method for calibrating displacement of an object in a coordinate system of at least one component placement device that comprises a camera, whereby the object having at least one reference element is brought into an image area of the camera, after which a first position of the reference element relative to the component placement device is determined from an image made by the camera (paragraph 0032), then the object is displaced relative to the component placement device (paragraph 0034), a second position of the reference element relative to the component placement device is determined from a second image made by the camera (paragraph 0036), after which a real displacement of the object relative to the component placement device is determined from the first and second relative positions, which real displacement is compared with the desired displacement (paragraphs 0028, 0037).

However, Isogai et al do not disclose whereby a deviation between the real displacement and the desired displacement in X, Y, and  $\Phi$  directions is taken into account by displacing another object with respect to the component placement device.

Regarding **claim 2 and subsequent dependent claims**, Okamoto et al (US 2001/0012985) disclose a method for calibrating a plurality of component placement devices positioned side by side, each component placement device comprising a camera, whereby an object having reference elements is brought into an image area of at least two cameras of at least two component placement devices, after which first position of at least one reference element are determined.

However, Okamoto et al do not disclose wherein the component placement devices each comprise its own coordinate system, that the first positions of at least one reference element are determined relative to the coordinate system of a first component placement device, and that the position of the coordinate system of the second component placement device relative to the coordinate system of the first component placement device is determined from the first and second relative positions of the reference elements.

### ***Response to Arguments***

3. Applicant's arguments, see Remarks, filed April 24, 2008, with respect to claims 1 and 2 have been fully considered and are persuasive. The rejections of claims 1 and 2 and subsequent dependent claims have been withdrawn.
